Chapter 6: System Guidelines & 2.0-Second Hold Gate Protocol

- 1. Real-Time 21 3D Landmark Processing:** The system evaluates 21 anatomical joints in real-time at 60 FPS directly within the browser.
- 2. 24-D Spatial Vector Normalization:** Distance ratios, inter-finger spreads, and finger curl configurations are normalized against palm scale.
- 3. The 2.0-Second Hold-to-Commit Gate:** To prevent accidental insertions during hand transitions, hold each gesture steady for 2.0 full seconds (2000 ms) in front of the camera to commit into the transcript and trigger speech synthesis.
