Audience: Educators, ASL Students, Healthcare Personnel & Assistive AI Developers

About This Reference Manual: American Sign Language (ASL) is a complete, natural language that has the same linguistic properties as spoken languages, with grammar that differs from English. ASL is expressed by movements of the hands and face. It is the primary language of many North Americans who are deaf and hard of hearing, and is used by many hearing people as well. This reference manual documents the official standardized manual alphabet, greeting gestures, medical signs, and recognition benchmarks.

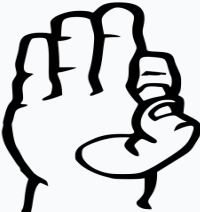

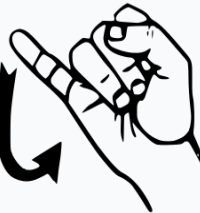

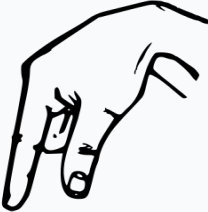

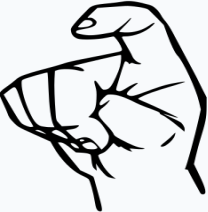

Chapter 1: The Five Fundamental Parameters of ASL

In ASL linguistics, every sign is composed of five simultaneous phonological parameters. Modifying any single parameter changes the meaning of the word entirely:

Parameter	Anatomical Definition	Key Examples in ASL
1. Handshape	The configuration of the fingers, knuckles, and thumb (e.g., Open 5, Fist, V-shape, Flat B, Curved C).	Distinguishes 'WATER' (W hand) from 'WINE' (W circling on cheek).
2. Location	The physical body area where the sign is articulated (e.g., Forehead, Chin, Chest, Neutral Space).	Forehead location indicates masculine signs ('FATHER'); Chin location indicates feminine signs ('MOTHER').
3. Movement	The dynamic trajectory path: straight, circular, tapping, twisting, brushing, or sweeping.	Distinguishes a single movement noun ('CHAIR') from a repeated movement verb ('SIT').
4. Palm Orientation	The direction the palm is facing: Inward (toward signer), Outward (toward viewer), Upward, Downward.	Distinguishes 'MINE' (palm toward chest) from 'YOURS' (palm outward).
5. Non-Manual Signals	Facial expressions, eyebrow furrowing/raising, mouth morphemes, and head position.	Raised eyebrows indicate Yes/No Questions ; Furrowed eyebrows indicate WH-Questions .

Chapter 2: Authentic Manual Alphabet Gallery (A–Z Plates)

Chapter 6: System Guidelines & 2.0-Second Hold Gate Protocol

- 1. Real-Time 21 3D Landmark Processing:** The system evaluates 21 anatomical joints in real-time at 60 FPS.
- 2. 24-D Spatial Vector Normalization:** Distance ratios, inter-finger spreads, and finger curl configurations are normalized against palm scale.
- 3. The 2.0-Second Hold-to-Commit Gate:** To prevent accidental insertions during hand transitions, hold each gesture steady for 2.0 full seconds (2000 ms) in front of the camera to commit into the transcript and trigger speech synthesis.
